

Geometry

Geometry

“The branch of mathematics concerned with the properties and relations of points, lines, surfaces, solids, and higher dimensional analogues.”

Oxford Dictionaries

Geometry

There are three methods to generate geometry in a digital environment.

Geometry

There are three methods to generate geometry in a digital environment.

- Scanning an existing object
- Generate a mathematical description of the design constraints and goals in order to generate geometry
 - Modelling

Kinds of Geometry ?

- Polygons
- NURBS
- Solids (CSG)
- T Splines
- Sub Division Surfaces
- Voxels
- Particles

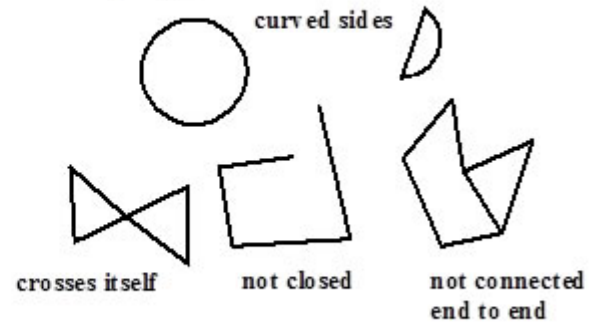

Polygons

Edges

Polygons

Polygon is a straight forward description of geometry in 3D.

- The shape is defined by its coordinate point or vertices.
The vertices will define the shape of the geometry
- The surface of the geometry is defined by the planar triangular faces
The faces will define the surface of the geometry
- The edges of the geometry are the edges of the faces.
The edge is always a straight line

Polygons

Advantages:

- Possibility of describing volumes
 - Less memory intensive
- Straight forward mathematical description
 - Commonly used geometry type

Disadvantage:

- The curvature is only approximated by the face between the vertices
 - High poly count necessary for curved shapes

[Zorin and Schröder, 2000]

NURBS

NURBS – Non Uniform Rational Bezier Spline

Curves are defined by the beginning and ending of the line and the weights in between.
The position of the weights will affect the curvature of the curve.
The amount of weights between the beginning and ending of the line defines the degree of the curve

NURBS

NURBS – Non Uniform Rational Bezier Spline

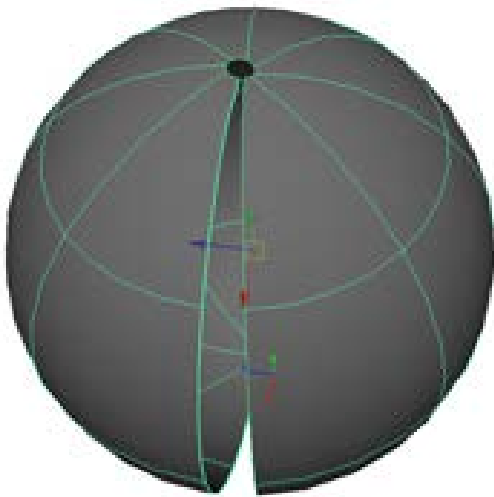

The curves are used as a basis for generating 3d geometry
The properties of the curve makes it especially suitable for curved surfaces
Standard geometry for many industries

NURBS

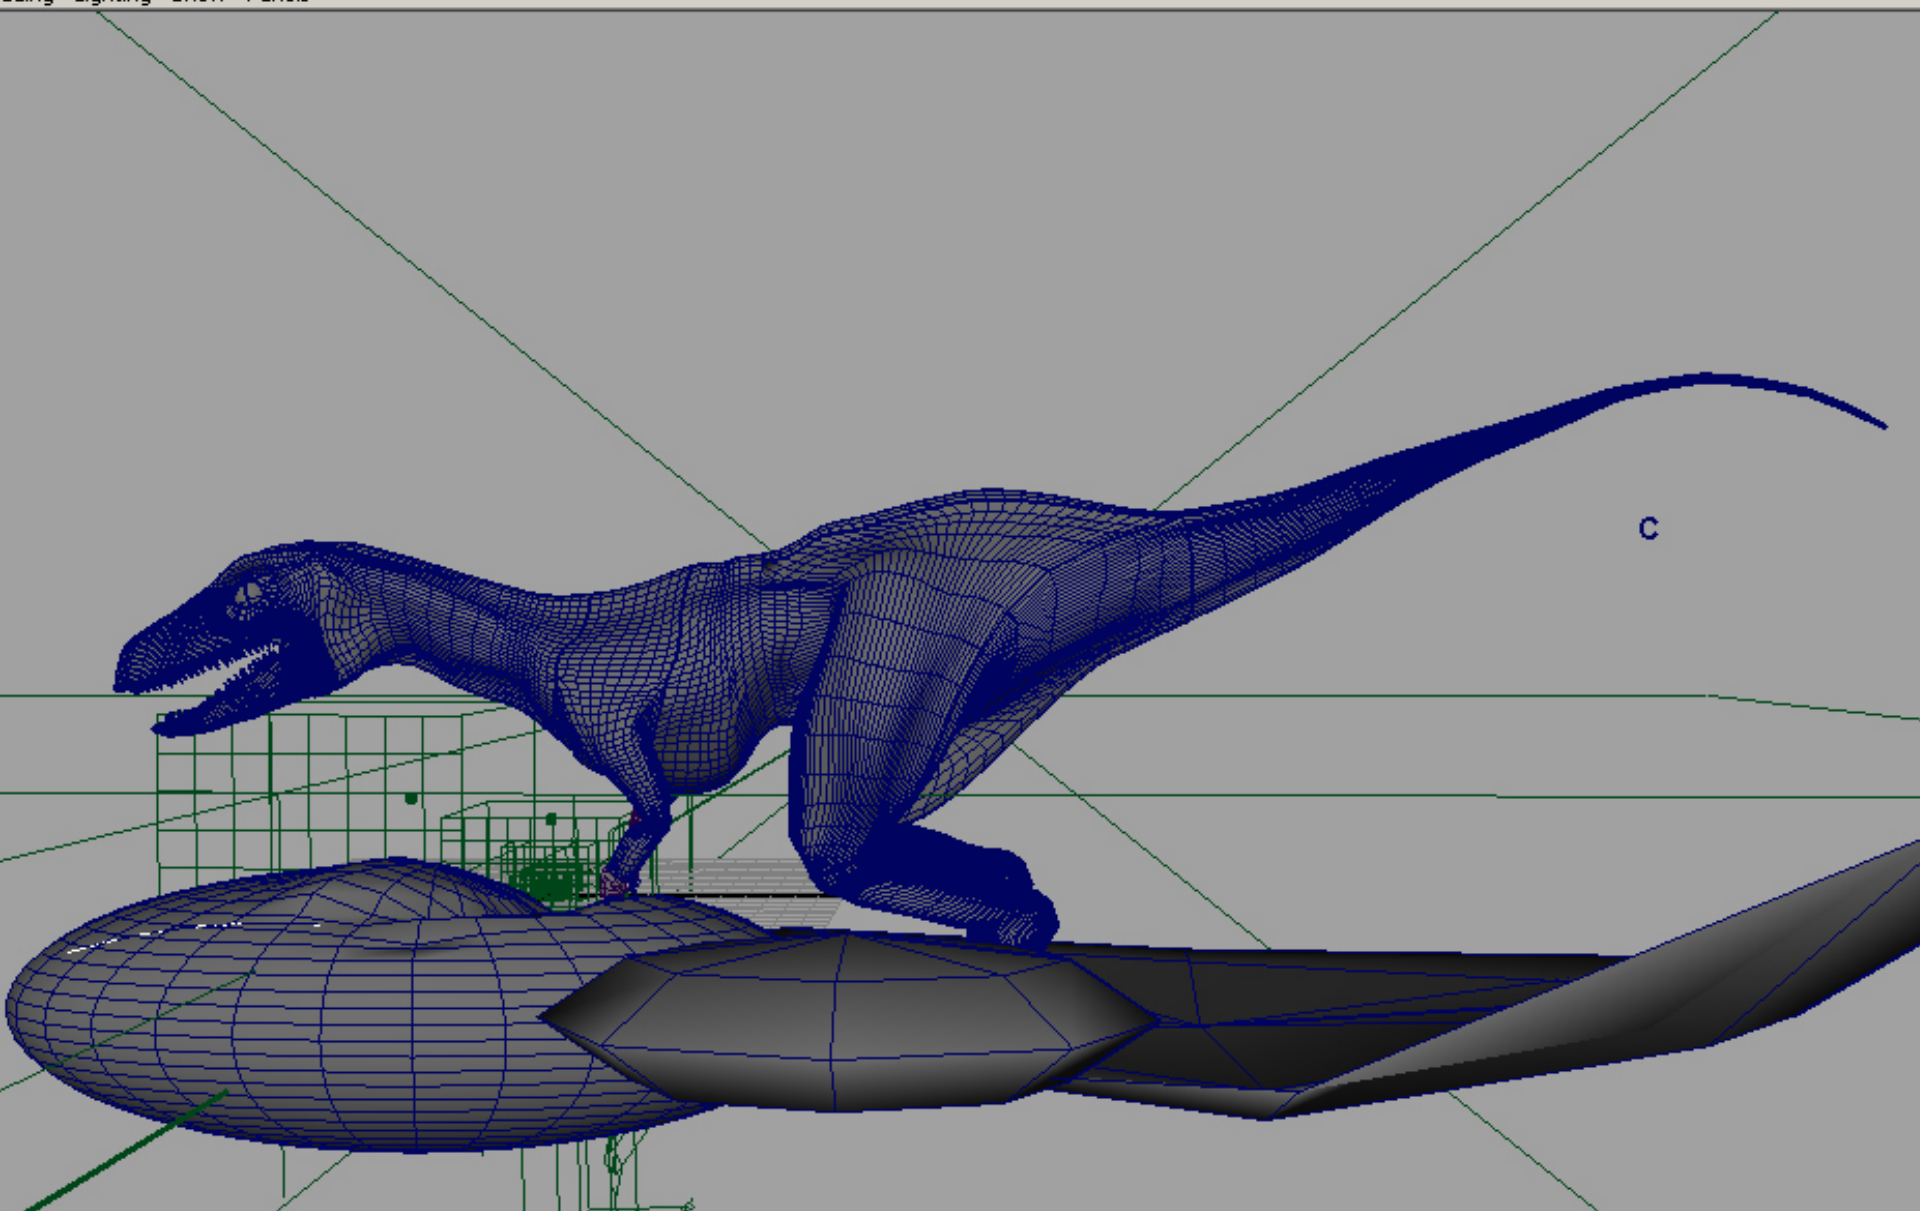

The surface:

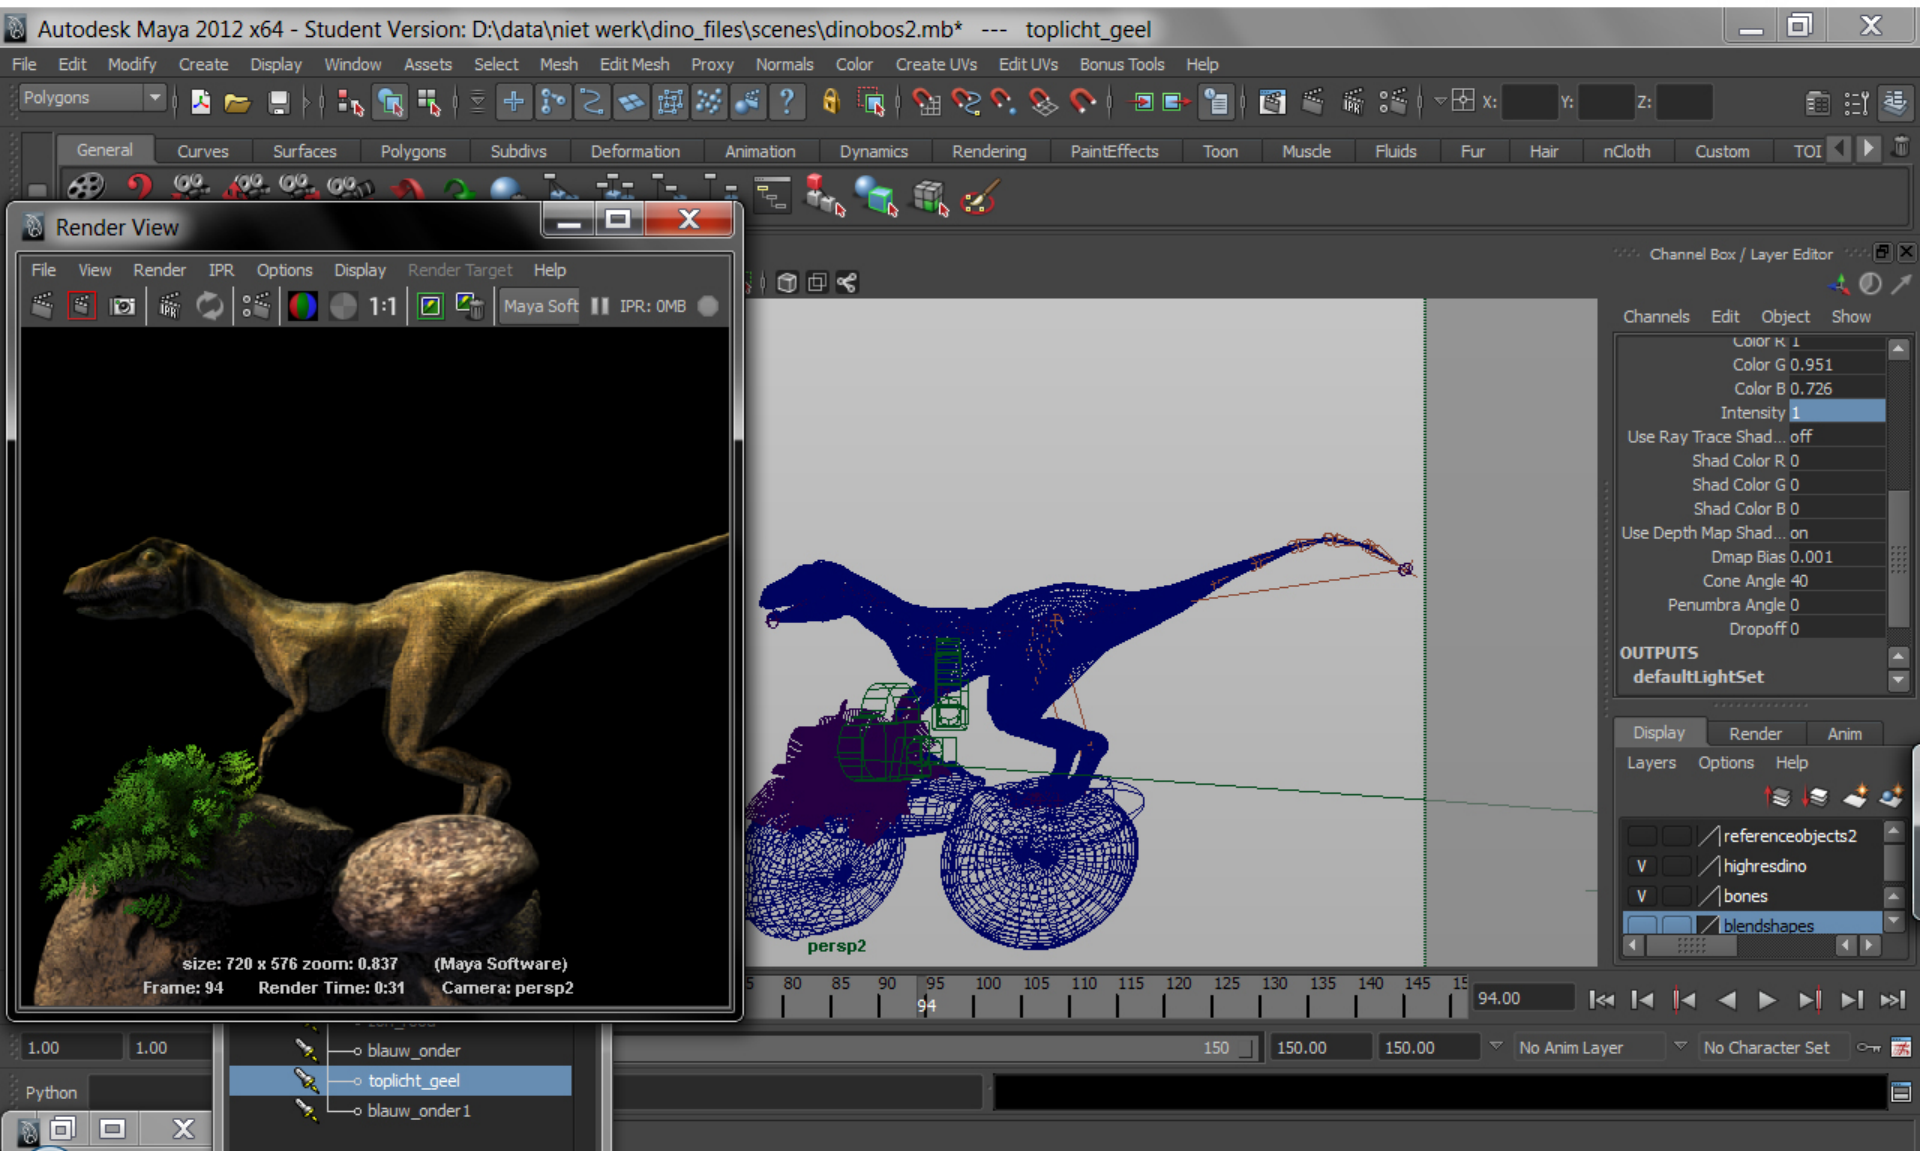

The shape of the NURBS surface is defined by the cross wise angled isoparms of the surface.

This means that a Nurbs surface is basically always a “rectangular” surface and never a volume
