

GRASSHOPPER WORKSHOP

WOO JAE SUNG · WS92@CORNELL.EDU · WWW.WOOJSUNG.COM

INTERFACE · TABS

+ Parameter Tab

Bridge between Rhino/user input and GH objects

+ Logic Tab

Data[geometries/numeric values] handling

+ Scalar Tab

Scalar data generating/processing

+ Vector Tab

Vector data generating/processing

+ Curve Tab

Curve entities generating/modifying/evaluating

+ Surface Tab

Surface entities generating/modifying/evaluating

+ Mesh Tab

Mesh entities generating/modifying/evaluating

+ Intersection Tab

Generating intersections between objects

+ Transform/deform Tab

Transform or deform objects

STEP01 · IDEA

+ RHINO INPUT (BASE CIRCLE + 2 POINTS)

x pulling pt.

+ DEFORM GEOMETRY BY VECTORS

+ INITIAL SURFACE (BASE GEOMETRY)

+ SUBDIVIDE SURFACE

+ GET SURFACE UV POINTS

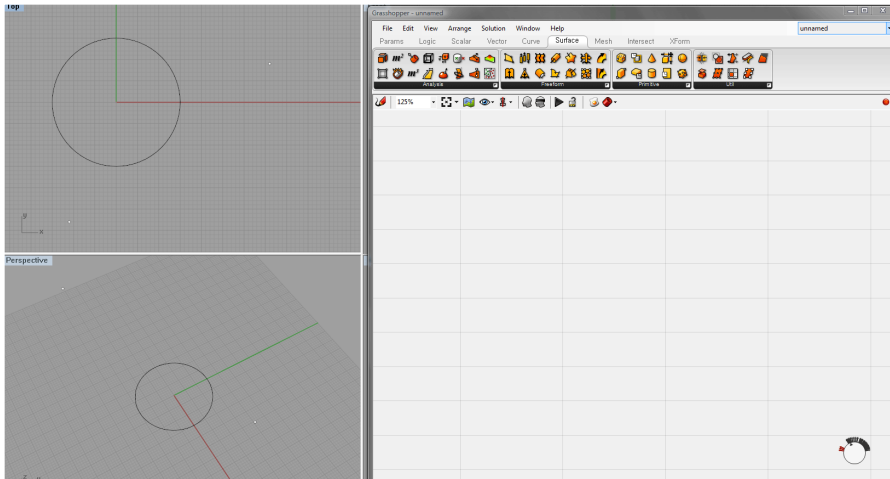

+ EXTRUDE (RANDOM HEIGHTS)

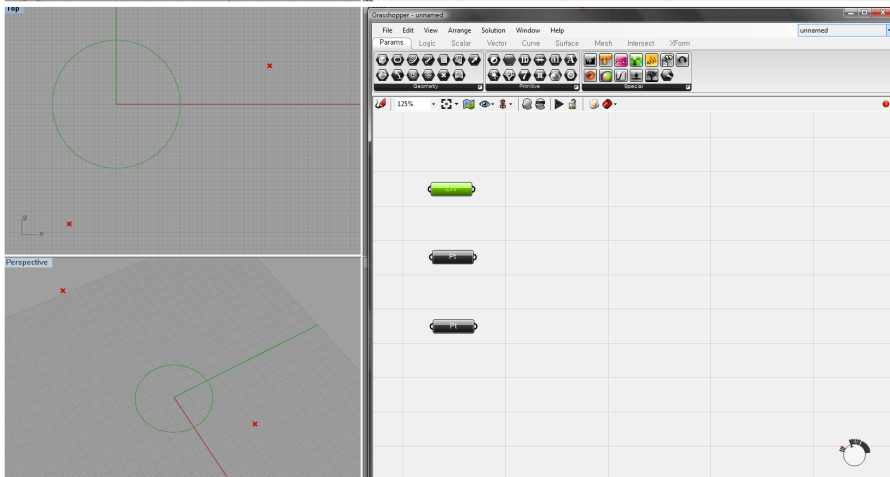

+ GET PULLING AND PUSHING VECTORS

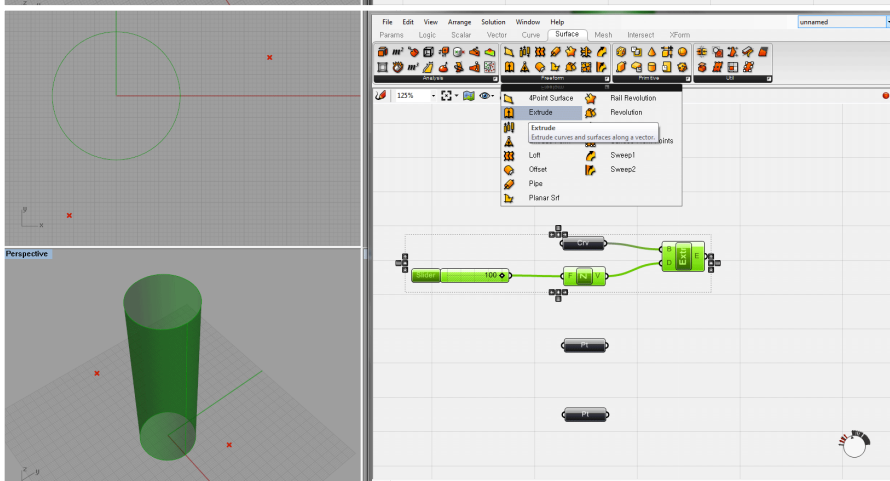

STEP02 · PROCESS

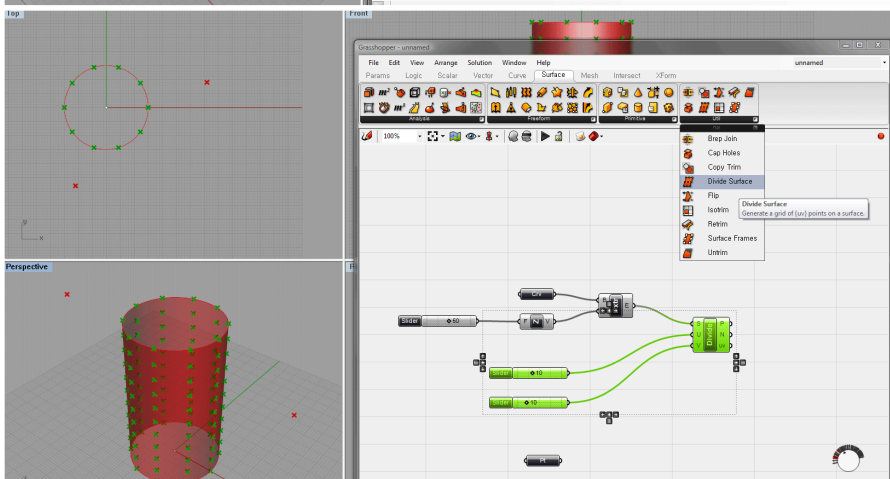

+ 1 BASE CIRCLE / 1 PULLING POINT / 1 PUSHING POINT

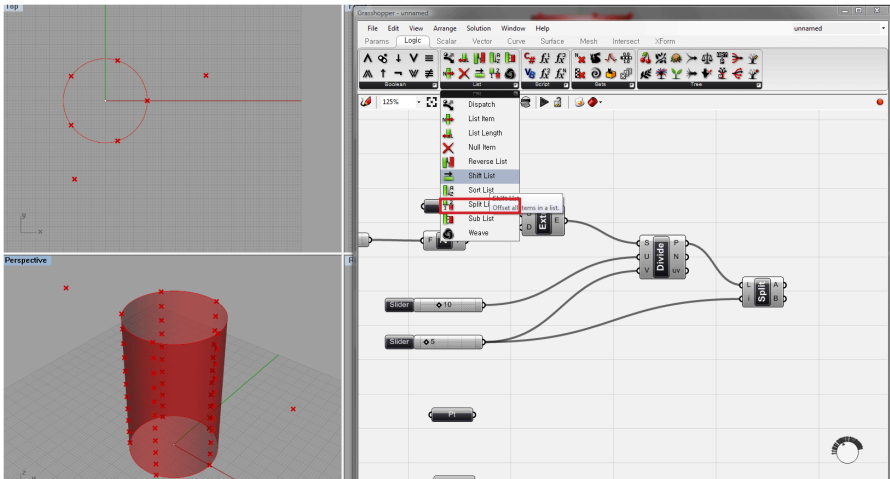

+ GH PARAMETERS

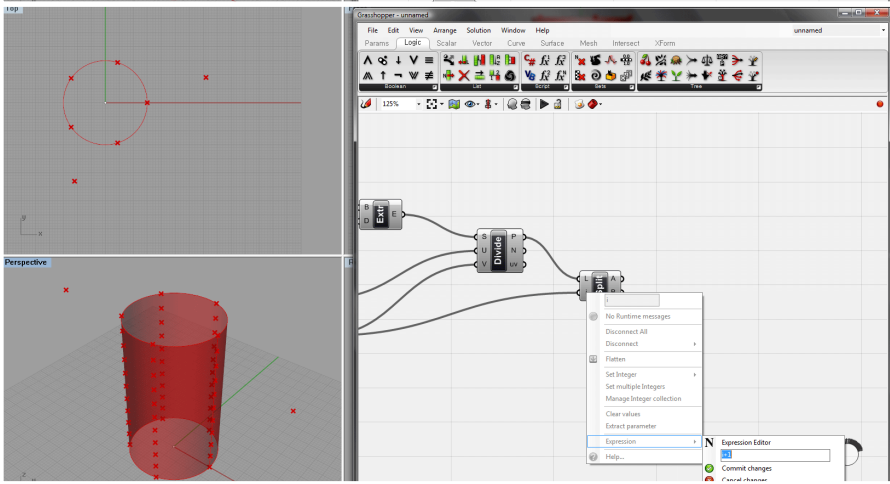

+ EXTRUDE ALONG Z VECTOR

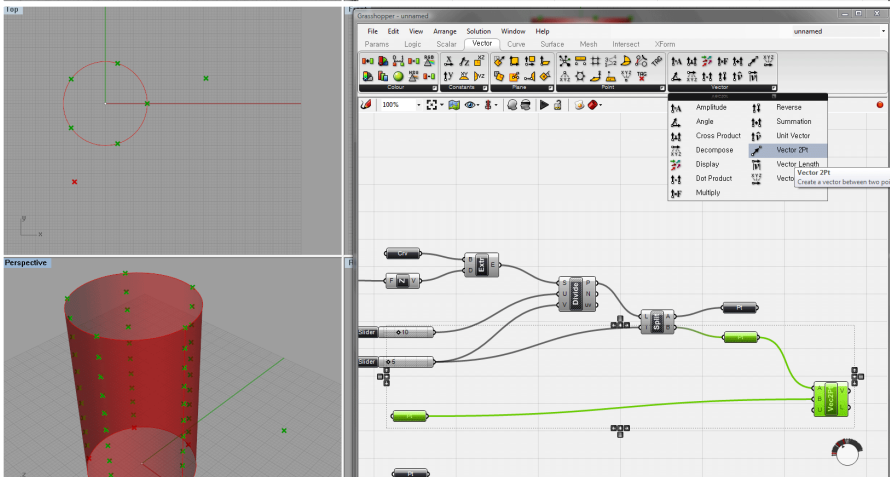

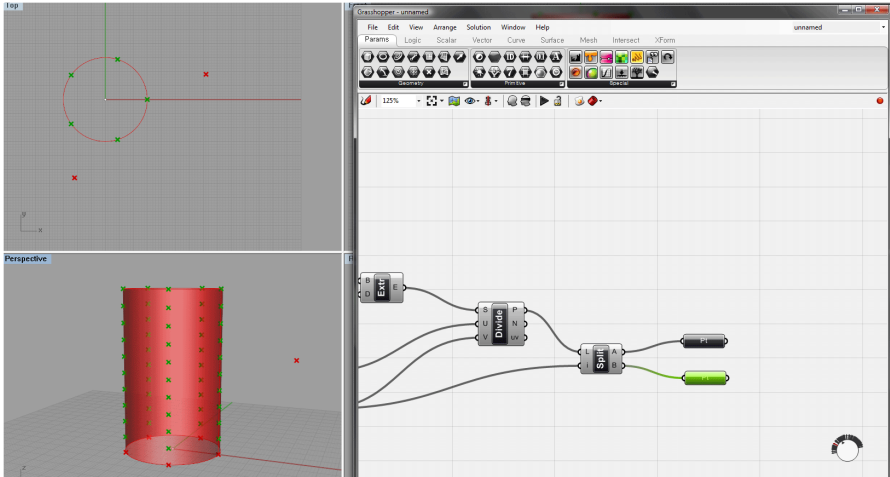

+ DIVIDE SURFACE

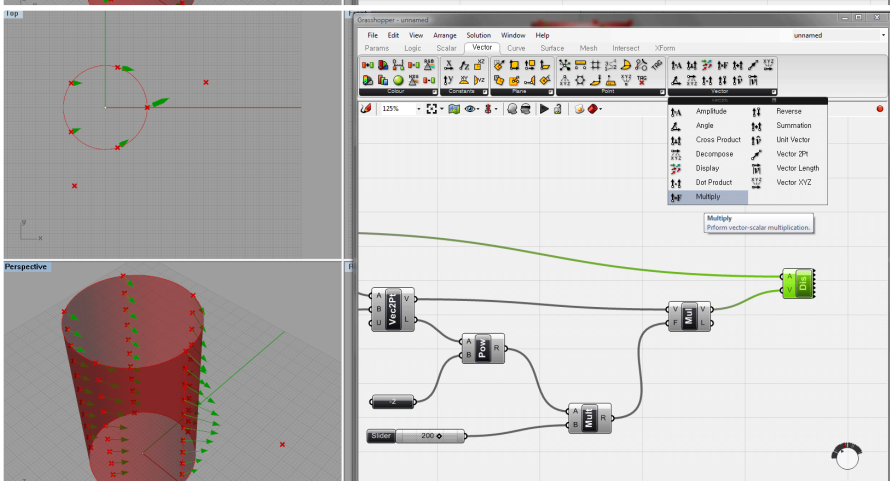

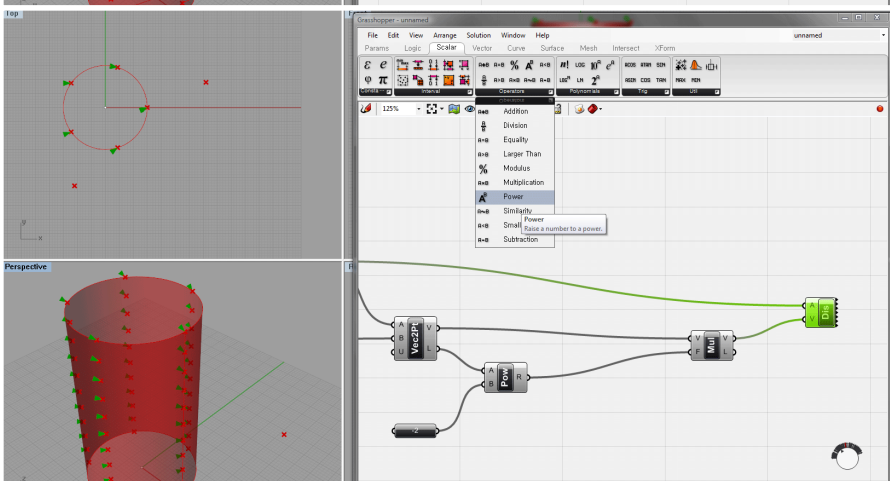

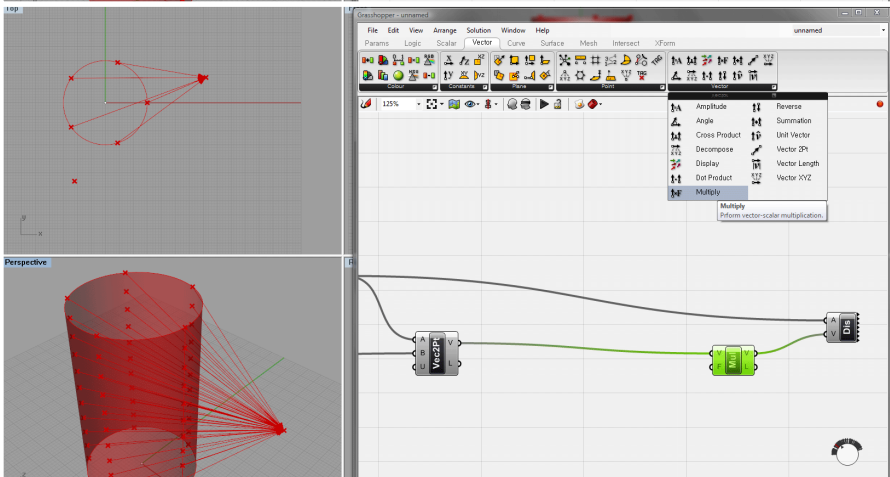

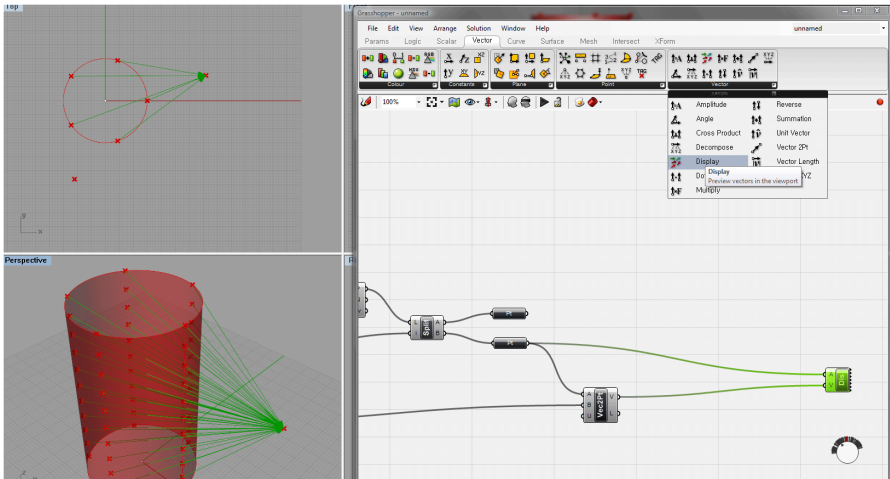

- SPLIT LIST
- BUILDING BASE WILL NOT MOVE

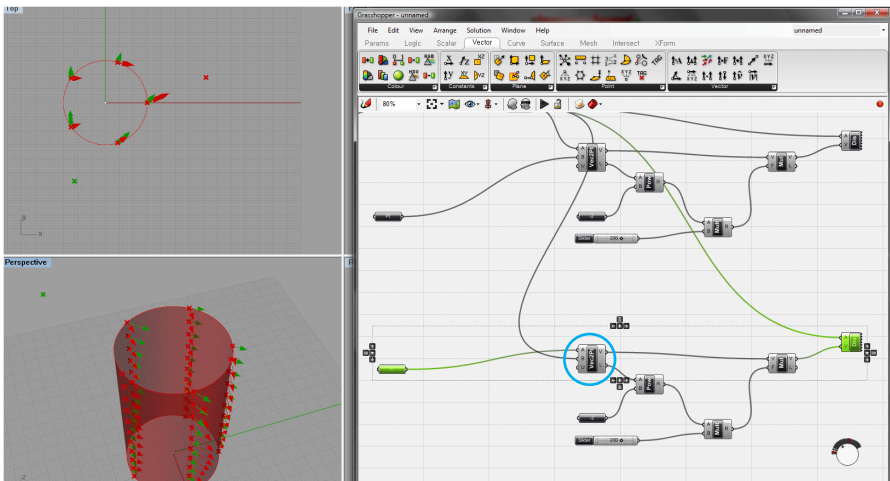

- SPLIT AT i+1

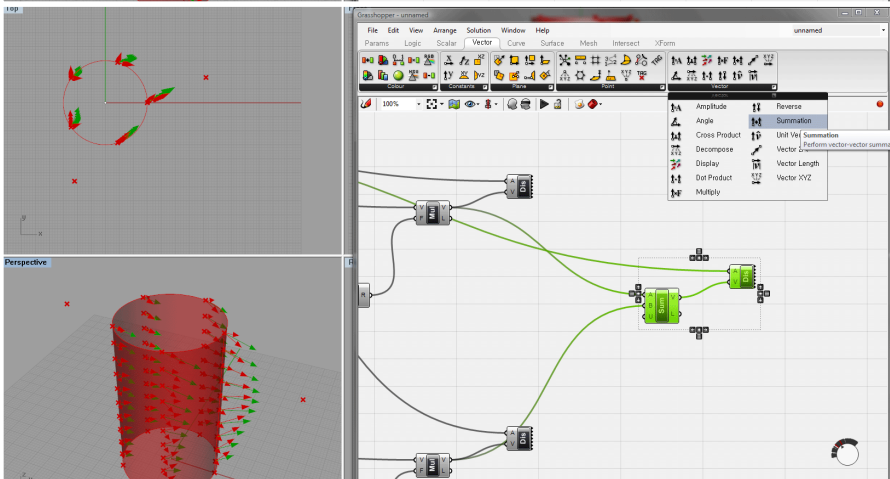

- GET PULLING & PUSHING VECTORS

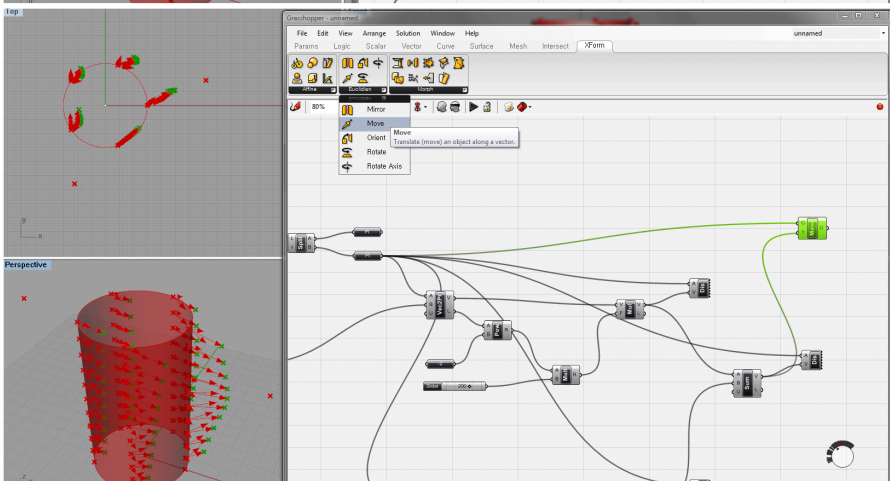

• RESCALE VECTOR INTENSITY BY POWER AND MULTIPLY

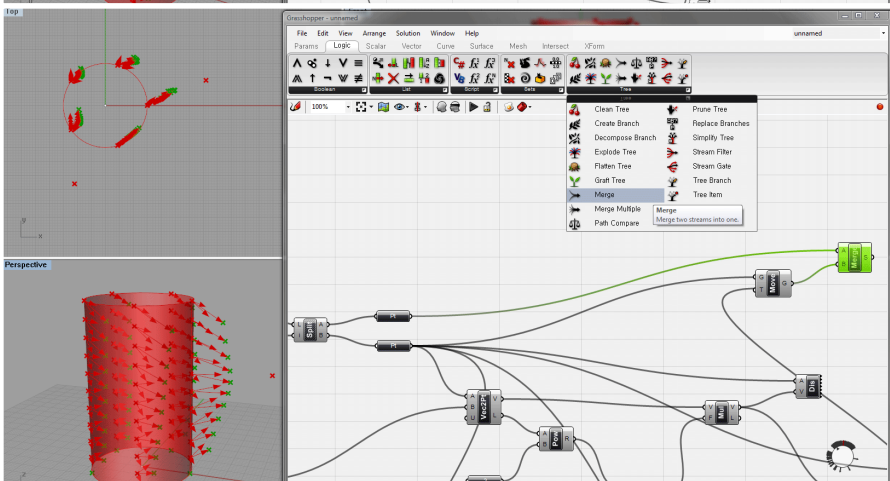

• NOTE OPPOSITE POINT CONNECTION FOR PUSHING VECTORS

• SUM PULLING AND PUSHING VECTORS

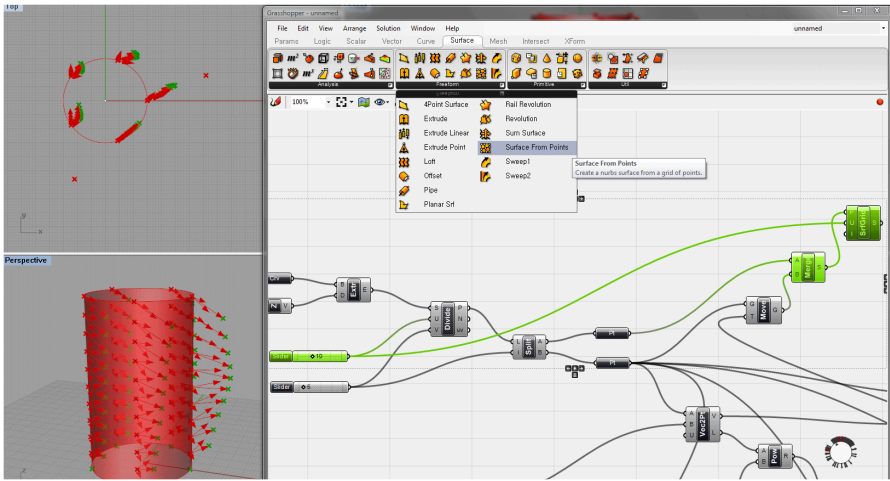

• MOVE POINT GRID BY VECTORS

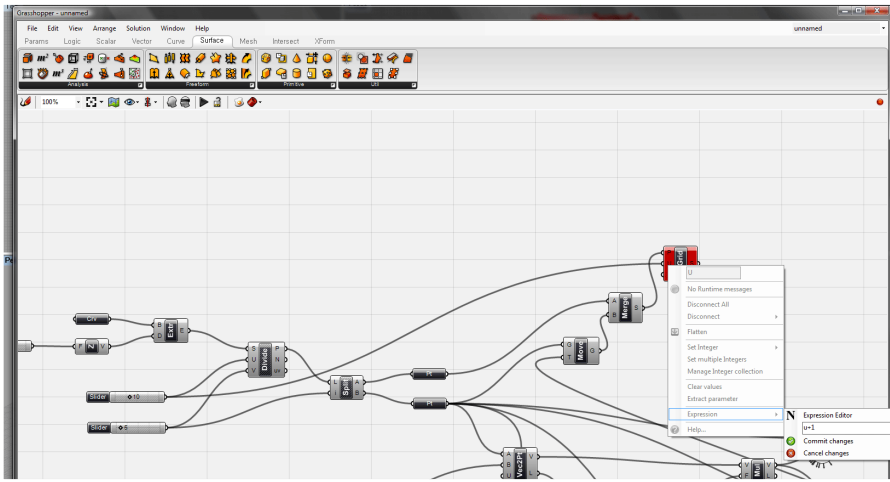

• MERGE

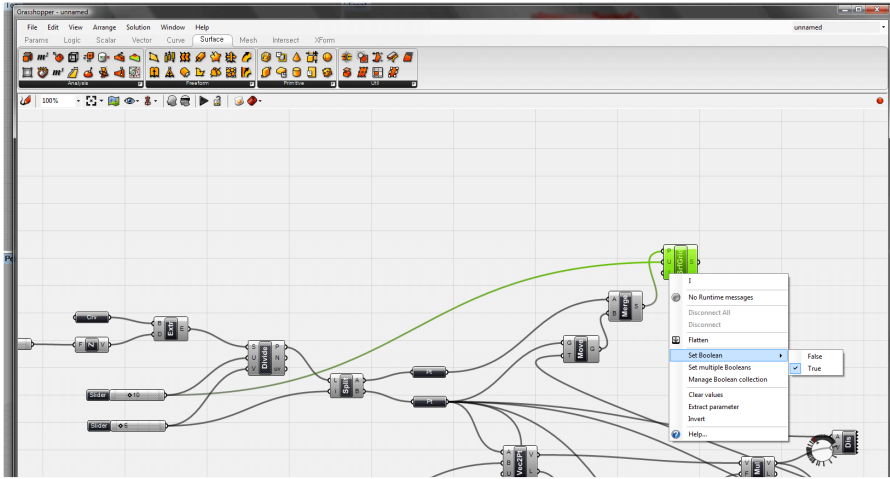

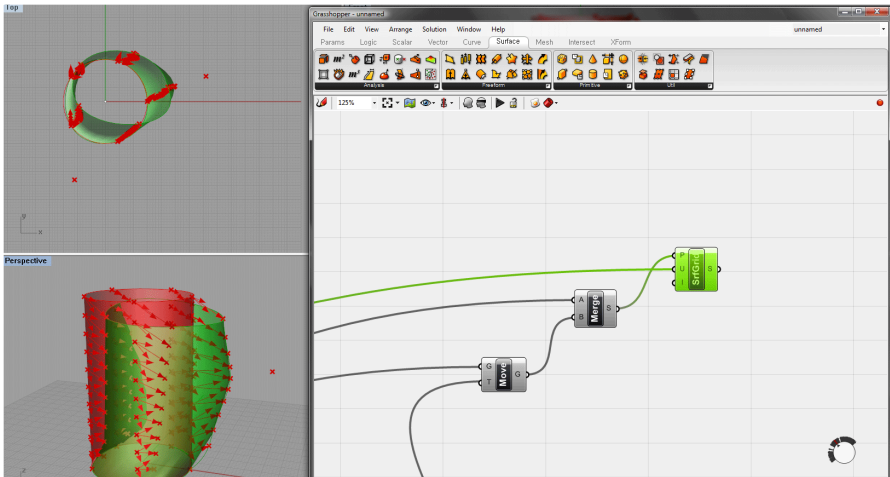

• MAKE SURFACE OUT OF POINT GRID

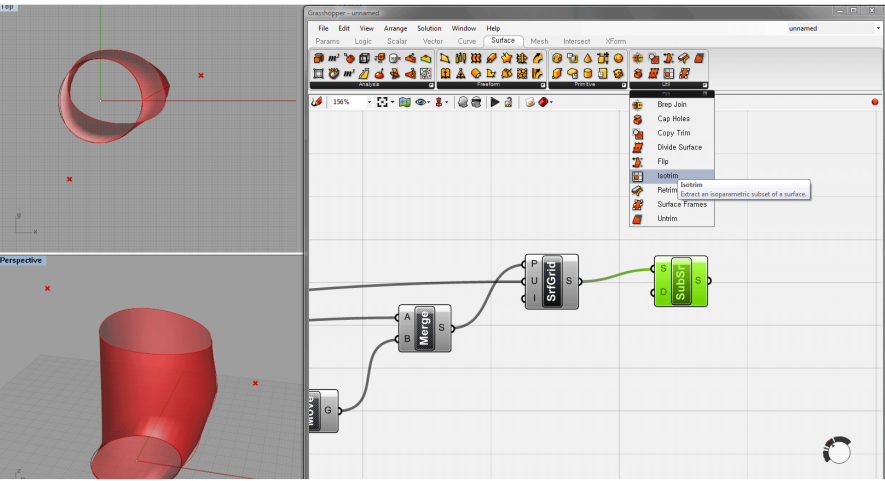

• SET U AS 'U+1'

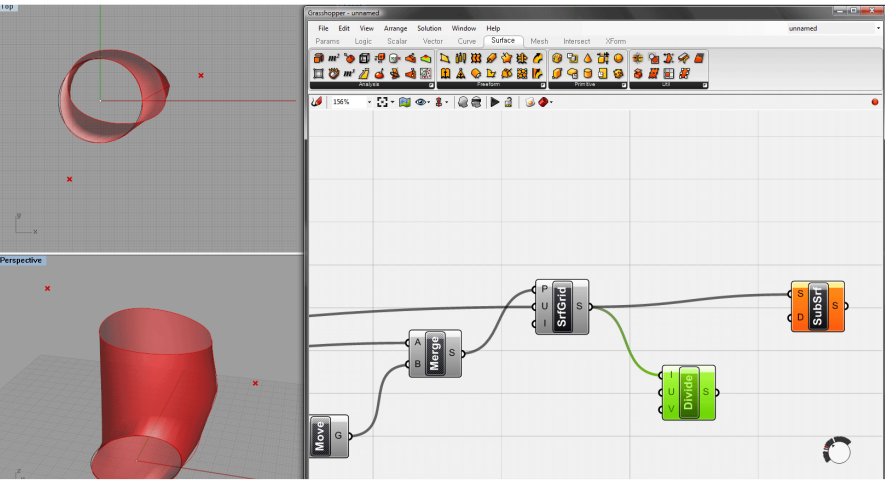

• SET i AS TRUE

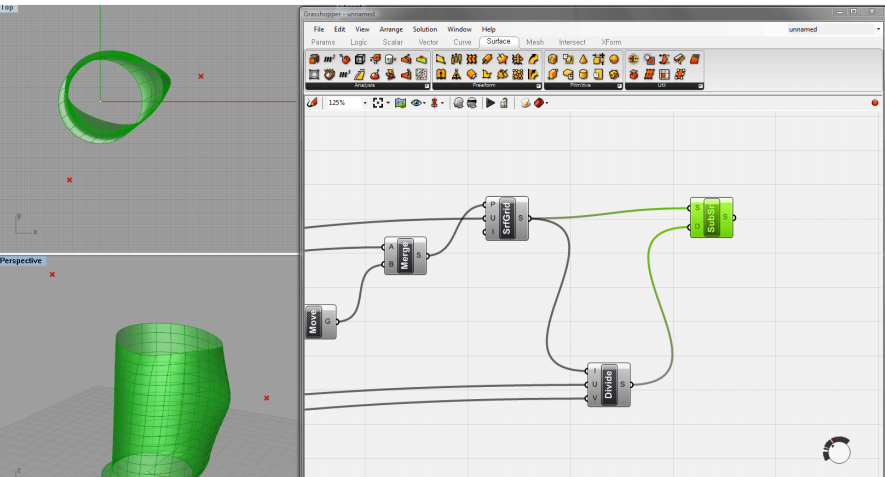

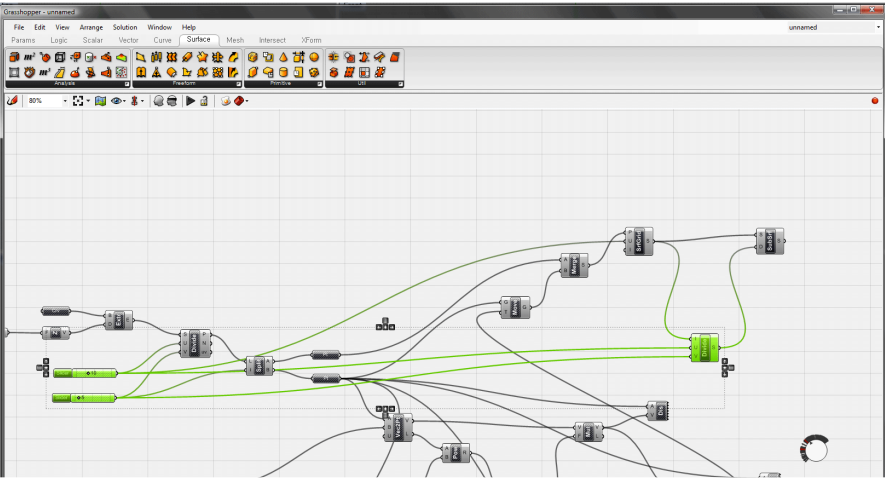

• BASE GEOMETRY TRANSFORMED

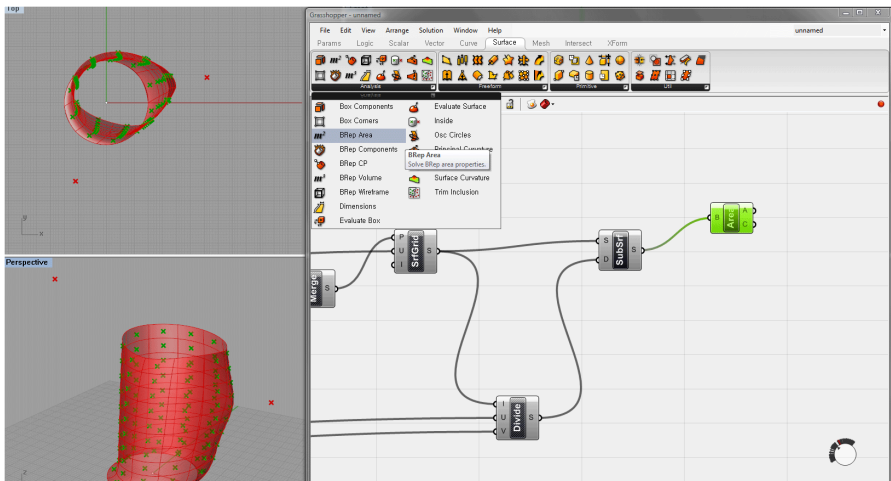

+ SUBDIVIDE SURFACE

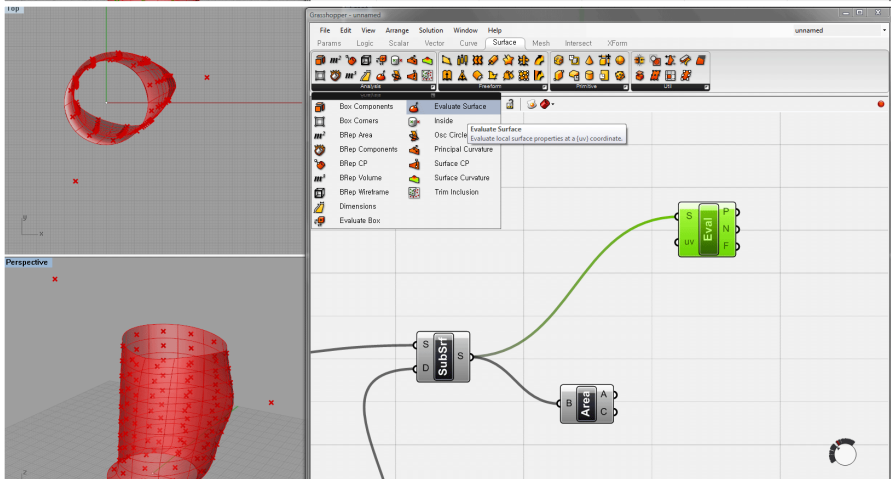

- DIVIDE INTERVAL
- SURFACES ARE UNDERSTOOD AS 2 DIMENSIONAL DOMAIN

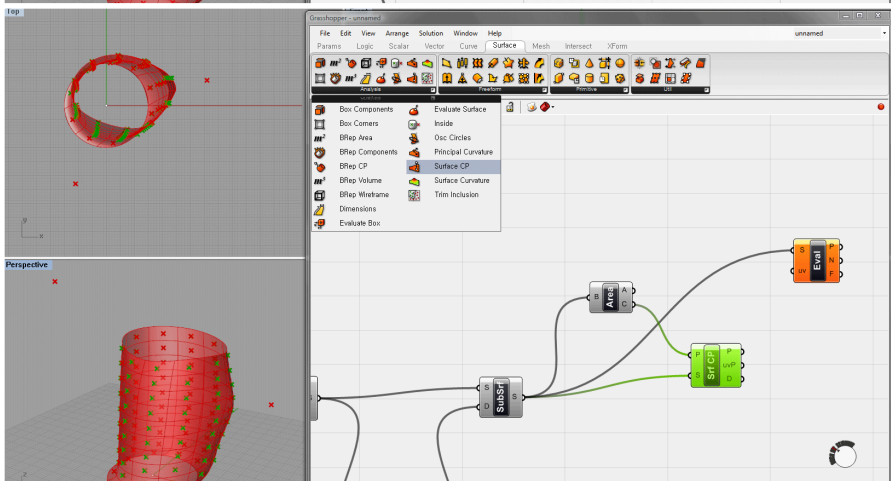

• ISOTRIM SURFACE

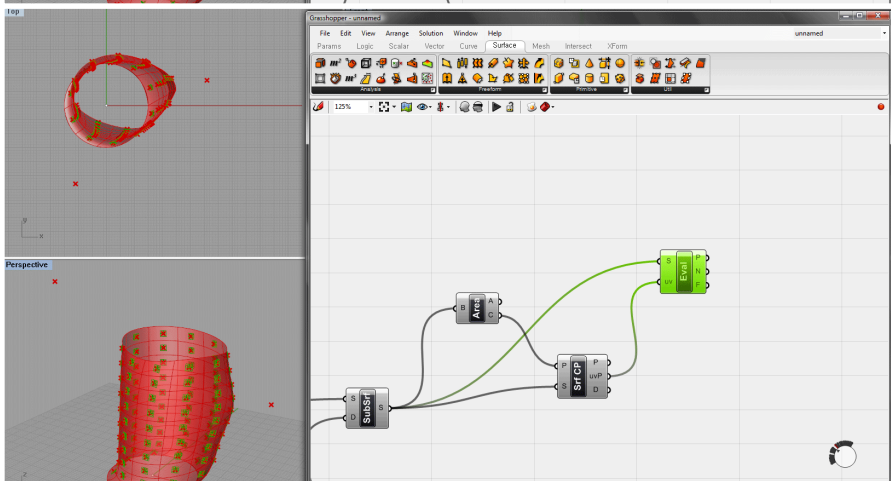

• GET CENTROID OF EACH SUBSURFACE

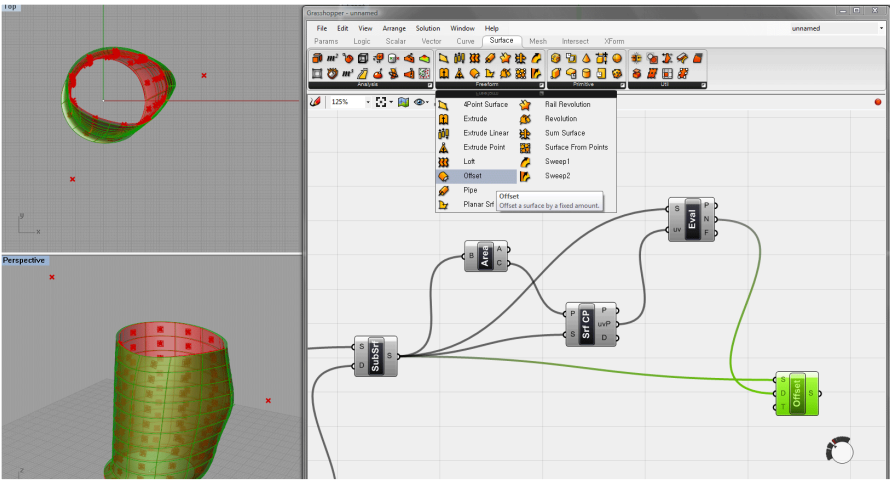

• GET NORMAL VECTORS BY EVALUATION SURFACE

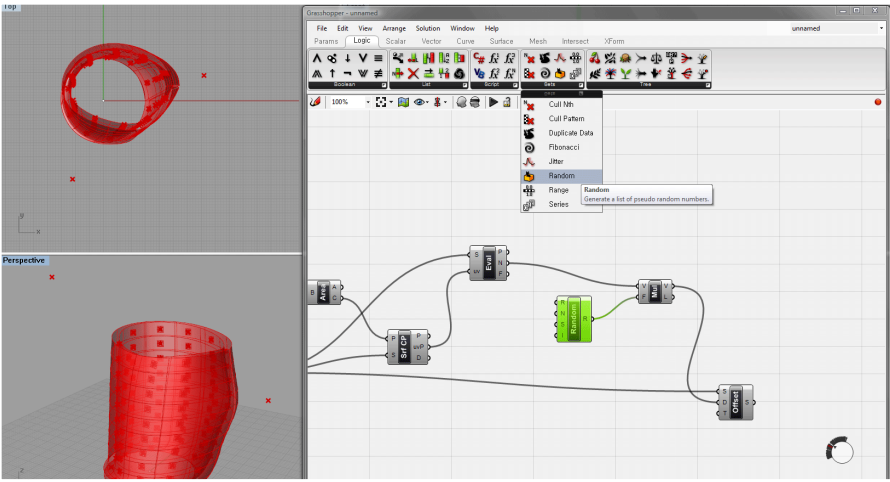

• GET UV POINTS BY 'CLOSEST POINT ON SURFACE' OBJECT

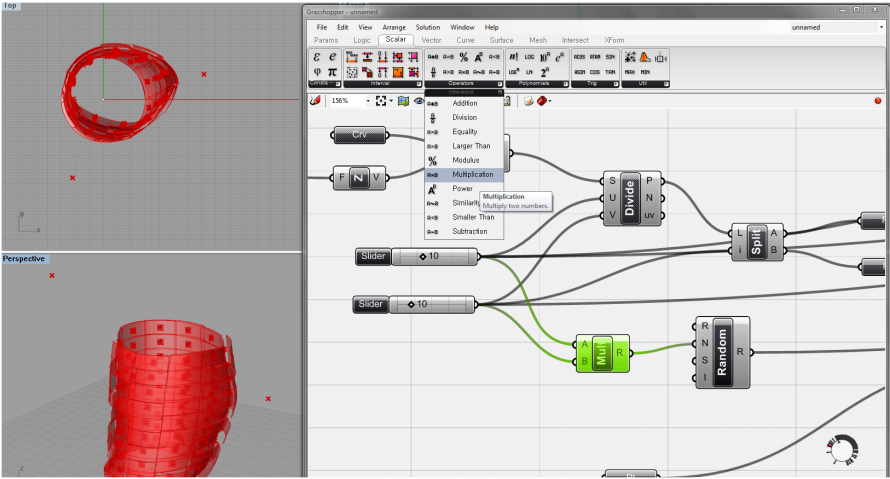

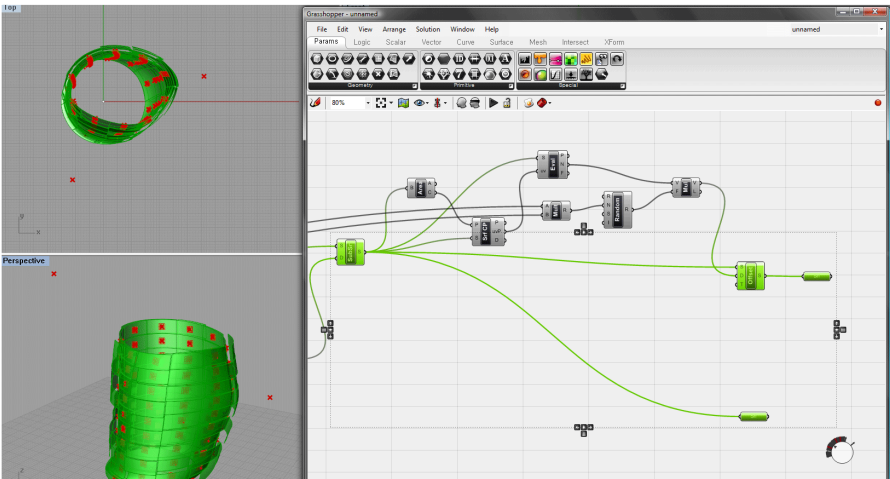

• OFFSET SURFACE

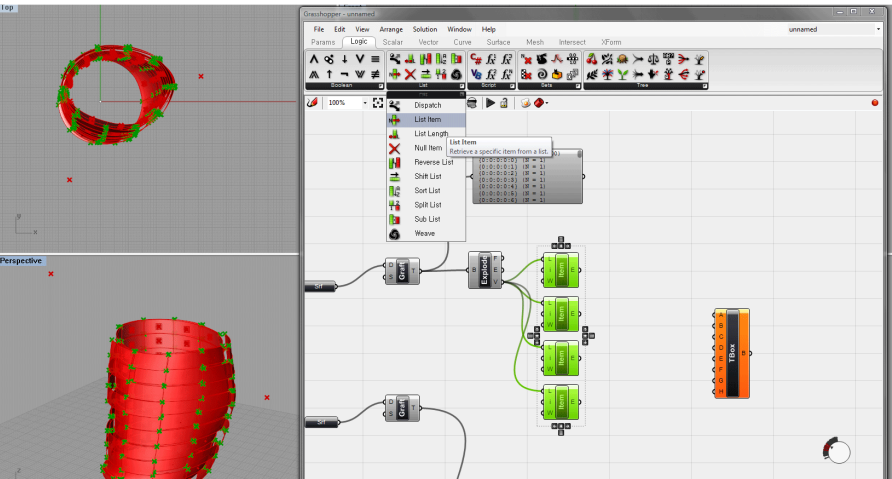

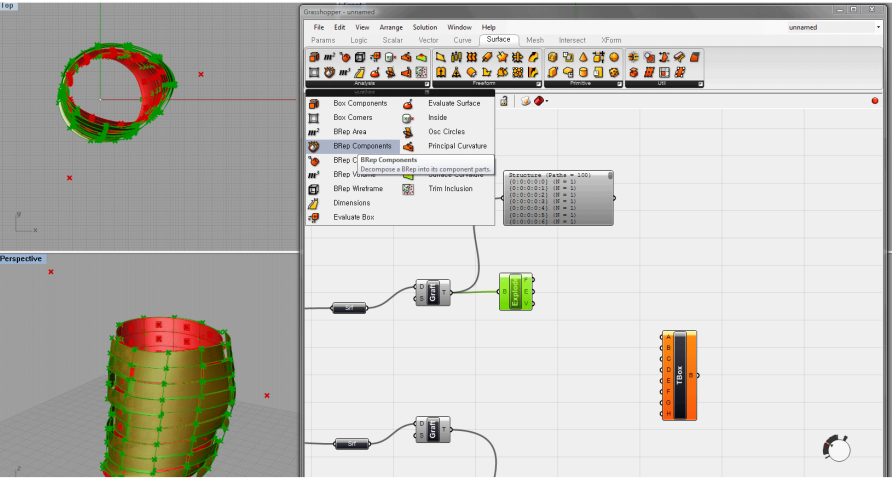

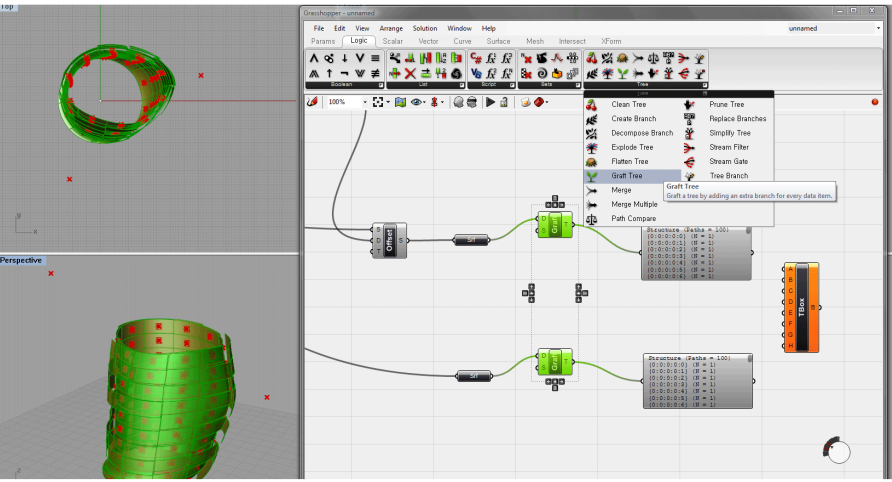

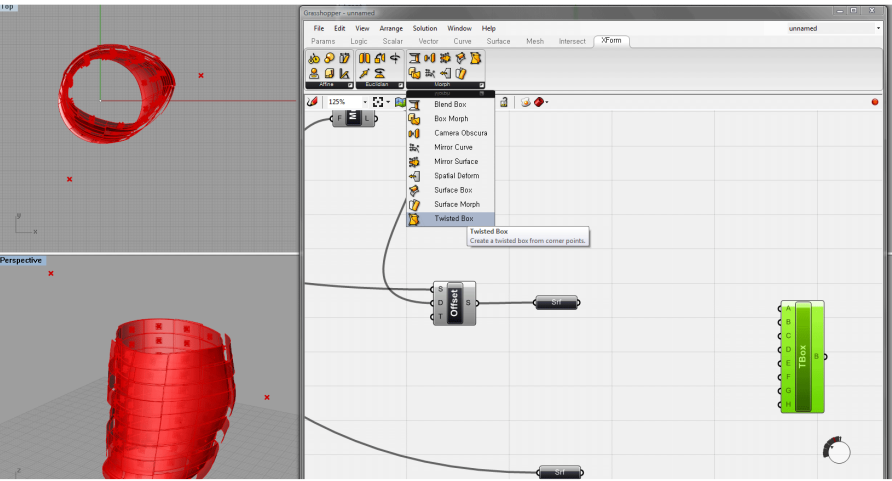

+ MULTIPLY OFFSET HEIGHT WITH RANDOM NUMBERS

• GET TOTAL NUMBER OF RANDOM NUMBERS BY U/V SLIDERS

+ TWO SETS OF SUBDIVIDED SURFACES

+ MAKE LOFT BOXES BETWEEN TWO SETS OF SURFACES

• STRUCTURE OF SURFACE SET (DATA TREE)

• GRAFT

• EXPLODE SUBSURFACES TO GET VERTICES
